11^{de} FirW Doctoraatssymposium

"The true sign of intelligence is not knowledge, but imagination"

11^{de} FirW Doctoraatssymposium

Aula, 1 december 2010

Overview

Civil and Structural Engineering

001	Design rules for technical-biological bank protection on non-tidal, navigable waterways	32
	Sieglien De Roo and Peter Troch	
002	Completely Recyclable Concrete	33
	Mieke De Schepper, Nele De Belie and Isabel Van Driessche	
003	The importance of mesoscale bedforms with respect to flow and morphology	34
	Kevin Delecuyse, Peter Troch and Koen Blanckaert	
004	Study of an isotropic lightweight steel-concrete bridge deck concept	35
	Peter Heinecks, Wouter De Corte, Veerle Boel and Geert De Schutter	
005	Effects of Climate Change on Flanders Water System	36
	Ruchita Ingle, Renaat De Sutter and Georges Allaert	
006	Optimization of the stiffening configuration of cylindrical shells on discrete supports	37
	Arne Jansseune, Rudy Van Impe and Wouter De Corte	
007	Breaking Wave Impacts on Coastal Structures with Cantilever Surfaces	38
	Dogan Kisaek, Peter Troch and Philippe Van Bogaert	
008	SMARTFIBER: Miniaturized sensor technology for smart composite structures	39
	Nicolas Lammens, Joris Degrieck and Geert Luyckx	
009	Numerical model for fire resistance of RC beams	40
	Limin Lu and Luc Taerwe	
010	Self-cleaning and/or Air-purifying Cementitious Materials: Evaluation Method	41
	Anibal Maury-Ramirez, Nele De Belie and Kristof Demestiere	
011	The role of spatial heterogeneity in exchange processes of river ecosystems	42
	Dieter Meire and Peter Troch	
012	Implementation of strain and ovalisation measurements in precast concrete tunnel linings	43
	Ken Schotte and Philippe Van Bogaert	
013	The influence of diaphragm stiffening on welded tubular nodes in arch bridges	44
	Dries Stael and Philippe Van Bogaert	
014	Multi-scale modelling of the performance of ternary cement-based materials	45
	Zhiyun Tan, Geert De Schutter and Guang Ye	

015	Thermal breakage of glass constructions Marc Vandebroek and Jan Belis	46
016	Climate change and spatial development Björn Verhoefstede, Georges Allaert, Hubert Gullinck and Jeroen Aerts	47
017	Development of a test set-up to measure large wave-by-wave overtopping masses Lander Victor and Peter Troch	48
018	Self-healing concrete by use of microorganisms Jiayun Wang, Nele De Belie and Willy Verstraete	49

Biomedical Engineering

019	Compressive Sensing in MRI Jan Aelterman, Wilfried Philips and Aleksandra Pizurica	52
020	Dynamic oxygen mapping in tumors by 19F MRI Steven Baete and Yves De Deene	53
021	Efficient numerical methods for computer-assisted TMS & conductivity estimation Nele De Geeter, Guillaume Crevecoeur and Luc Dupré	54
022	The EEG Problem with Uncertain Conductivity through Polynomial Chaos Rob De Staelen, Roger Van Keer and Marián Stodíčka	55
023	2D Mapping of pathological nuclei Jonas De Vylder and Wilfried Philips	56
024	Multi-subject spatial filtering in brain-computer interfaces Dieter Devlaminck, Patrick Santens, Bart Wyns and Georges Ote	57
025	Presence of $hlyA$, $fliC$ and $toxR$ genes of vibrios in <i>Vibrio harveyi</i> Hettipala Arachchige Darshanee Ruwandeepika and Peter Bossier	58
026	Plasma treatment of polycaprolactone for cell adhesion studies Tinneke Jacobs, Rino Moren, Nathalie De Geyter and Christophe Leys	59
027	Measurement of arterial stiffness and central aortic pressure in sub-Saharan Africa Jan Kips, Sebastian Vermeersch, Luc Van Bortel and Patrick Segers	60
028	Simultaneous emission and transmission imaging for PET-MRI using time-of-flight information Pieter Mollert and Stefaan Vandenbergh	61
029	Determination of anisotropic ratio of the skull for EEG source localization in patients with epilepsy Victoria Montes Restrepo and Steven Staelens	62
030	Compressive Sensing in DT-MRI Danièle Perrone, Aleksandra Pizurica, Wilfried Philips and Alexander Leemans	63
031	Gesture based human-computer interface for 3D design Vincent Spruyt, Wilfried Philips and Alessandro Ledda	64
032	Multimodal integration of simultaneous acquired EEG and fMRI data to study cognitive processes Gregor Stroobbe, Stefaan Vandenbergh and Yves Rossel	65
033	Optimization of collimator combinations for brain SPECT Karen Van Audenhage and Stefaan Vandenbergh	66

034	The use of a castellated mesh for resistance calculations of upper airways Cedric Van Holsbeke, Pascal Verdonck and Peter Van Ransbeeck	67
035	Development of iterative reconstruction software to investigate influence of μCT on μSPECT Bert Vandeghinste and Steven Staelens	68
036	Experimental Flow Visualization in Lower Airways by means of PIV Mathias Vermeulen, Tom Claessens, Jan W. De Backer, Peter Van Ransbeeck and Pascal Verdonck	69

Industrial Management

037	The impact of production interruptions on kitting, an analytical study Elise De Cuyper and Dieter Fiems	72
038	A Combined DC-programming Hybrid Approach for the Single-Vehicle Inventory Routing Problem Yiqing Zhong and El-Houssaine Aghezzaf	73
Architecture		
039	Performance evaluation methods of night ventilation Kim Goethals and Arnold Janssens	76
040	Museum architecture: the monographic factor Maarten Liefvooghe, Bart Verschaffel and Wouter Davidts	77
041	The impact of lifestyles on housing in Flanders Ann Pisman, Georges Allaert and Piel Lombardi	78
Material Sciences		
042	Base torque for consistency in a tribological setup Matyas Ando and Patrick De Baets	80
043	Deformation estimation through Digital Image Correlation (DIC) Corneliu Cofaru, Wilfried Philips and Wim Van Paepegem	81
044	Electroconductive textiles Iida Kazami, Carla Hertleer and Lieva Van Langenhove	82
045	Ultrasound as Non-Destructive Evaluation Tool Mathias Kersemans, Ebrahim Lamkanfi, Wim Van Paepegem and Joris Degrieck	83
046	Elevated temperature resilience of monofilaments for artificial turf application Blerina Koljini and Paul Kiekens	84
047	Assessment of a low-cost protocol for an ab initio based prediction of the mixing enthalpy at elevated temperatures Kurt Lejaeghere and Veronique Van Speybroeck	85
048	Hydrogen blisters during electrochemical charging Diana M. Pérez Escobar, Kim Verbeke and Marc Verhaege	86

- 049 **Triological characteristics of cemented carbides machined by wire-EDM**
Neczin Perez and Patrick De Baets
- 050 **The influence of nanocomposites in polymers on the wear and friction performance**
Vanessa Rodriguez and Patrick De Baets
- 051 **Damping and vibration behaviour of flax-carbon composite bicycle racing frames**
Joachim Vanvallegheem, Wim Van Paepegem, Mia Loccufer and Ives De Baere

Mechanics

- 065 **Automatic Reaction Network Generation: 3D Structure & Reactivity**
Nick Vandewiele, Marie-Françoise Reyniers and Guy Marin
- 066 **Metal Organic Frameworks as catalysts for alkene epoxidations**
Marthias Vandichel, Veronique Van Speybroeck and Michel Waroquier

Applied Physics

- 052 **Computer simulation of material deposition in gaps of castellated surfaces in fusion machines**
Dmitry Maiveev, Guide Van Oost and Andreas Kirschner
- 053 **Non-thermal atmospheric pressure plasma jet and its application for polymer treatment**
Abdollah Sarani and Christophe Ley
- 054 **Mesoscopic hysteresis model for ferromagnetic materials**
Adinda van den Berg and Luc Dupré
- 055 **Insight into zeolite nanogrowth through the analysis of vibrational spectra in terms of internal coordinates**
Marc Van Houeghem, Veronique Van Speybroeck and Michel Waroquier
- 056 **Development of reliable force fields for molecular simulations of metal-organic frameworks**
Louis Vanduyffhuys and Veronique Van Speybroeck
- 057 **Characterization of plasma discharge in single gas bubbles in water**
Patrick Vamprae and Christophe Ley
- 058 **Dispersed Propagation Dynamics of an Open-air Argon plasma Jet by a Grating-ICCD Camera Diagnostic System**
Qing Xiong and Christophe Ley

Chemical Engineering

- 059 **Kinetic Modeling of Nitroxide Mediated Polymerization of Styrene**
Lien Bennein, Marie-Françoise Reyniers and Guy Marin
- 060 **Single-Event Microkinetics of Aromatics Hydrogenation on a Pt catalyst**
Tapan Bera, Joris Thybaut and Guy Marin
- 061 **Kinetic modeling of ATRP of styrene**
Evelyn Butrick and Marie-Françoise Reyniers
- 062 **Experimental Investigation and Microkinetic Modelling of Ethylene Oligomerization**
Kenneth Toch, Joris Thybaut and Guy Marin
- 063 **Kinetic Modeling of the Atom Transfer Radical Polymerization of n-Butyl Acrylate: Accounting for short chain branches**
Carolina Toloza, Marie-Françoise Reyniers and Guy Marin
- 064 **Kinetic modeling of polymerization processes for opto-electronic applications**
Paul H.M. Van Steenberghe, Marie-Françoise Reyniers and Guy Marin

- 067 **Prediction of local extinction in numerical simulations with pre-tabulated combustion models**

110

- 068 **Modelling airflow patterns and the behaviour of ammonia in and around naturally ventilated barns**

111

- 069 **Development of a fretting fatigue fixture**
Jan De Pauw, Patrick De Baets and Wim De Waele

112

- 070 **Tensile behaviour of thin metal sheets: extended characterization and fatigue influence**
Jesús Galán López, Patricia Verleysen and Joris Degrick

113

- 071 **Study of alternative fuels for medium speed diesel engines with the GUCCI-setup**
Jonas Galle, Sebastian Verhelst and Erik Dick

114

- 072 **Development of a strain-based flaw assessment method for defective pipeline girth welds**
Stijn Hertelé, Wim De Waele and Rudi Denys

115

- 073 **Performance evaluation of louvered fin compact heat exchangers with vortex generators**
Henk Huisseune and Michel De Paepe

116

- 074 **Numerical simulation of pressures on rigid cylinder subjected to slamming loads**
Sidhar Vepa Kameswara, Wim Van Paepegem and Jan Vierendeels

117

- 075 **Study of the importance of differential diffusion on modeling in numerical simulations of turbulent combustion of hydrogen**
Georgios Maragkos, Bart Merci and Pieter Rauwoens

118

- 076 **A Computational Model for the Vibratory Response in Dry Friction Process**
Patric Daniel Neis and Patrick De Baets

119

- 077 **A comparative study between the ensemble Kalman Filter and the particle filter in rainfall-runoff models**
Douglas Plaza G., Robain De Keyser and Valentin R.N. Pauwels

120

- 078 **Influence of contact and material models on springback simulation in sheet metal forming**
Mohsen Safaei and Wim De Waele

121

- 079 **Simulations of hydrogen auto-ignition**
Ivana Stankovic and Bart Merci

122

- 080 **Pressure Measurement on the Surface of a Rigid Cylindrical Body during Slamming Wave Impact**
Diederik Van Nuffel, Ives De Baere, Wim Van Paepegem and Joris Degrick

123

- 081 **Threaded Pipe Connections under Dynamic Loading Conditions**
Jeroen Van Wierenbergh, Patrick De Baets and Wim De Waele
- 082 **Modelling the combustion of light alcohols in spark-ignition engines**
Jeroen Vancollie and Sebastian Verhelst
- 083 **Influence of stress triaxiality on the fracture behaviour of flawed weldments**
Marthias Verstraete, Wim De Waele and Rudi Derys

Photonics

- 084 **Photonic biosensor in the angular spectrum**
Elewout Hallynck and Peter Biensman
- 085 **Integration of GaSb photodetectors on SOI: Towards mid-infrared photonic integrated circuits**
Nannicha Hattasan, Gunther Roelkens and Dries Van Thourhout
- 086 **A tunable laser based on III-V semiconductor integration on a silicon waveguide circuit**
Shahram Keyvaninia, Gunther Roelkens and Dries Van Thourhout
- 087 **Enhanced Sensitivity of Silicon-On-Insulator Surface Plasmon Interference Biosensors with Additional Silicon Top Layer**
Khair Quang Le and Peter Biensman
- 088 **Photonic Integrated Circuits Using III-V/SOI microresonators**
Rajesh Kumar and Geert Morther
- 089 **Optical Force Sensors for Smart Prostheses**
Jeroen Missinne, Geert Van Steenberge, Jan Vanfleteren and Peter Van Daele
- 090 **Optical nonlinearities of Pbs quantum dots**
Abdoulghafar Omari, Zeger Hens and Dries Van Thourhout
- 091 **Simulation Tools for Silicon Photonics Arrayed Waveguide Grating**
Shihmab Pathak, Dries Van Thourhout and Wim Bogaerts
- 092 **Dipole radiation near metal interfaces for electroluminescence**
Lieven Peninck and Kristiaan Neyts
- 093 **Grating Light Valves**
Sukumar Rudra and Dries Van Thourhout
- 094 **Towards a quantum dot mode-locked laser integrated on the Silicon-On-Insulator platform**
Marlijn Tassaert, Gunther Roelkens and Dries Van Thourhout
- 095 **Photonic reservoir computing with SOAs and delays**
Kristof Vandormaele, Peter Bienstman and Roel Baets
- 096 **Photonic Integrated Wavelength Router on SOI for Optical Fiber Communication Applications**
Diedrik Vermeulen, Gunther Roelkens and Dries Van Thourhout
- 097 **Integrated Optical Gas Sensors on Silicon-on-Insulator Platform**
Nebiyu Yebbo, Roel Baets and Zeger Hens

Electrical Engineering

- 098 **A coupled stochastic-inverse approach for a priori error estimation of magnetic material properties of an electromagnetic device**
Ahmed Abdalrh and Luc Dupré
- 099 **Predictive Control of Interconnected Machines**
Abhishek Dutta and Robain De Keyser
- 100 **Mathematical Framework for Multi-Camera Cooperative Scene Interpretation**
Sebastian Gruenwedel and Wilfried Philips
- 101 **Electrical drives in wind energy conversion**
Damian Kowal, Luc Dupré and Peter Sergeant
- 102 **Coordination of hybrid systems networks, for urban traffic control**
Nicolae Marinică and René Boel
- 103 **Control of three-phase inverter-connected DG-units with regard to the power quality in low voltage networks**
Bart Meersman and Lieven Vandeveld
- 104 **Distributed Voltage Control in Electrical Power Systems**
Mohammad Moradzadeh and René Boel
- 105 **Key and chord extraction from audio**
Johan Pauwels and Jean-Pierre Martens
- 106 **No-reference wavelet-based blur metric for image quality assessment**
Ljiljana Platiša and Wilfried Philips
- 107 **Towards improved proper name recognition**
Bert Réveel and Jean-Pierre Martens
- 108 **Coordinating Road Traffic Network**
Herman Sutorio and René Boel
- 109 **Maximizing the Energy Output of an Axial Flux Permanent Magnet Generator for a Small Wind Energy Application**
Hendrik Vansompel, Luc Dupré and Peter Sergeant
- 110 **Learning Control for Production Machine**
Yu Zhong, Bart Wyns and Robain De Keyser

Electronics

- 111 **Bend Discontinuities in Differential Signaling**
Celina Gazda, Dries Vande Ginste and Hendrik Rogier
- 112 **Design of 10 Gb/s Burst Mode Limiting Amplifier**
Jasmin Put, Johan Bauwelinck, Xing-Zhi Qiu and Jan Vandeweghe
- 113 **Integrated Subblocks for RF Ranging Applications**
Guy Torfs, Jan Vandeweghe and Johan Bauwelinck
- 114 **Analysis and design of high power monolithically integrated switching DC/DC converters**
Jindrich Windels and Jan Doutreligne
- 115 **A CMOS Class-E Power Amplifier for Wideband RF ranging system**
Li Zhiheng, Jan Vandeweghe and Johan Bauwelinck

The influence of diaphragm stiffening on welded tubular nodes in arch bridges

Dries Stael

Supervisor: Philippe Van Bogart

I. INTRODUCTION

Bridges consisting of circular hollow sections are becoming increasingly popular. Although they are highly appreciated because of their aesthetic value, tubular arch bridges are considered to be costly, mainly due to the use of welded nodes. Due to geometric discontinuity and the welding process, various stress concentrations are introduced at the nodes, making this type of bridge prone to fatigue damage caused by the varying traffic loads. High peak values of stresses, so-called hot spot stresses, are reached near the weld toe of the nodes. If these stresses can be decreased, then the fatigue strength of the bridge will increase, allowing for a more slender design.

II. DIAPHRAGM STIFFENING

The objective is to reduce the hot spot stresses near the weld toe. A possible solution is to provide diaphragms exactly at the location of the weld toe, inside the main tube. These diaphragms will reinforce the main tube thus reducing the in-plane deformation of this tube. Thanks to the reinforcements the hot spot stress concentrations at the weld toe are indeed reduced.

III. WOLUWE LANE TUBULAR ARCH BRIDGE

This tubular arch bridge is a three-track elevated railway bridge. This bridge is an example of a framework tubular bridge because the bending moments in the vertical

tubes are not negligible. Due to these larger bending moments, the stiffening of the nodes with diaphragms seemed imperative.

Figure 1. Model of a node with diaphragms.

The use of the hot spot stress method is recommended to calculate more precisely the stresses at the weld toe. This method relates the fatigue life of a joint to the hot spot stress range at this location, rather than the nominal stress range. The calculation of the hot spot stresses is carried out by using detailed three-dimensional FE-models. Dividing the hot spot stress ($\sigma_{h,s}$) by the nominal stress gives a stress concentration factor (SCF). The results of these calculations are given in Table 1.

Table 1. Results of FE calculations.

Type of node	$\sigma_{h,s}$ [MPa]	SCF
Without diaphragms	77,39	1,99
With diaphragms	42,61	1,10

IV. CONCLUSIONS

The diaphragms have a positive influence on the hot spot stresses near the weld toe. The fatigue resistance of the whole bridge increases considerably due to this reduction of the weld stresses.
