Normal development of the foal, normal- and abnormal stages 1, 2 and 3, prolaps vesicae, uterine torsion and many other complications pre- and postpartum, mal- posture and repositions & foetotomy, caesarean section, repositions & much more... More than 60 minutes of film and 3-dimensional animations.... This is a new, original and scientifically correct presentation of equine parturition in all its normal and abnormal features. These animations are meant to give students, veterinarians, teachers, biologists, breeders and horse owners more insights into the birth process of the mare.
