 Introduction: What Is Embodied Music Interaction? <i>Marc Leman, Micheline Lesaffre, and Pieter-Jan Maes</i>	 1
 <b>PART 1</b>	
<b>Dynamical Music Interaction Theories and Concepts</b>	<b>11</b>
 1 The Interactive Dialectics of Musical Meaning Formation <i>Marc Leman</i>	 13
 2 Metrically Structured Time and Entrainment <i>Guy Madison, Fredrik Ullén, and Björn Merker</i>	 22
 3 Participatory Sense-Making in Joint Musical Practice <i>Andrea Schiavio and Hanne De Jaegher</i>	 31
 4 Playing with the Beat: A Process-Oriented Approach to Studying Sensorimotor Synchronization in Early Childhood <i>Ana Almeida, Katie Overy, and Dorothy Miell</i>	 40
 5 The Merging of Musician and Musical Instrument: Incorporation, Presence, and Levels of Embodiment <i>Luc Nijjs</i>	 49
 6 Music Knowledge Construction: Enactive, Ecological, and Biosemiotic Claims <i>Mark Reybrouck</i>	 58

**PART 2**

**Expressive Gestural Interaction 67**

- 7 Cognitive and Sensorimotor Resources for the Encoding  
of Expressiveness During Music Playing 69  
*Muzaffer Çorlu, Pieter-Jan Maes, and Marc Leman*
- 8 Beyond Emotion: Multi-Sensory Responses to Musical Expression 78  
*Giovanni De Poli, Maddalena Murari, Sergio Canazza,  
Antonio Rodà, and Emery Schubert*
- 9 Conveying Expressivity and Individuality in Keyboard Performance 87  
*Bruno Gingras*
- 10 The Resilience Approach to Studying Group Interaction  
in Music Ensemble 96  
*Donald Glowinski, Fabrizio Bracco, Carlo Chiorri,  
and Didier Grandjean*
- 11 Agency in Embodied Music Interaction 105  
*Nikki Moran*
- 12 Postures and Motion Shaping Musical Experience 113  
*Rolf Inge Godøy*
- 13 The Communication of Emotions in Dance 122  
*Edith Van Dyck, Birgitta Burger, and Konstantina Orlandatou*

**PART 3**

**Social Music Interaction 131**

- 14 Group Flow 133  
*Tòm Cochrane*
- 15 Entrainment and Mutual Adaptation in Musical Movement and Dance 141  
*Tommi Himberg*
- 16 Embodied Expression Through Entrainment and Co-Representation  
in Musical Ensemble Performance 150  
*Jennifer MacRitchie, Manuel Varlet, and Peter E. Keller*
- 17 Music Performance as Joint Action 160  
*John Michael*

18	Do Jazz Improvisers Really Interact? The Score Effect in Collective Jazz Improvisation <i>François Pachet, Pierre Roy, and Raphaël Foulon</i>	167
19	Gestural Interactions in Ensemble Performance <i>Davi Mota, Mauricio Loureiro, and Rafael Laboissière</i>	177
20	Interpersonal Coordination in Dyadic Performance <i>Marc R. Thompson, Georgios Diapoulis, Tommi Himberg, and Petri Toiviainen</i>	186
21	Embodied Social Synchronization in Children's Musical Development <i>Leon van Noorden, Leen De Bruyn, Raven van Noorden, and Marc Leman</i>	195
<b>PART 4</b>		
	<b>Sociological and Anthropological Approaches</b>	<b>205</b>
22	Embodied Interaction with “Sonic Agents”: An Anthropological Perspective <i>Filippo Bonini Baraldi</i>	207
23	The Ethnography of Embodied Music Interaction <i>Martin Clayton</i>	215
24	Combat-Dancing, Cultural Transmission, and Choreomusicology: The Globalization of Embodied Repertoires of Sound and Movement <i>Paul Mason</i>	223
25	The Hiplife Zone: Cultural Transformation Processes in African Music Seen from the Angle of Embodied Music Interactions <i>Dominik Phyfferoen, Koenraad Stroeken, and Marc Leman</i>	232
26	Crafting the Playing Body as an Infrastructure of “Immediate” and “Mediate” Embodied Music Cognition in an Academic Jazz Program <i>Eitan Wilf</i>	241
27	Brain-to-Brain Coupling and Culture as Prerequisites for Musical Interaction <i>Elvira Brattico and Peter Vuust</i>	249

<b>PART 5</b>	
<b>Empowering Health and Well-Being</b>	<b>259</b>
28 Coupling Music and Motion: From Special Education to Rehabilitation <i>Danilo Spada and Emmanuel Bigand</i>	261
29 Embodied Music Listening <i>Lars Ole Bonde</i>	269
30 Jymmin—The Medical Potential of Musical Euphoria <i>Thomas Hans Fritz</i>	278
31 Music in the Exercise and Sport Domain: Conceptual Approaches and Underlying Mechanisms <i>Costas I. Karageorghis, Panteleimon Ekkekakis, Jonathan M. Bird, and Marcelo Bigliassi</i>	284
32 Monitoring Music and Movement Interaction in People with Dementia <i>Micheline Lesaffre, Bart Moens, and Frank Desmet</i>	294
33 Synchronization to Music as a Tool for Enhancing Non-Verbal Communication in People with Neurological Diseases <i>Nia Cason, Loris Schiaratura, and Séverine Samson</i>	304
34 Modifying Movement Optimization Processes with Music <i>Rebecca S. Schaefer and Scott T. Grafton</i>	313
<b>PART 6</b>	
<b>Modeling Music Interaction</b>	<b>321</b>
35 Modeling Music Interaction <i>Denis Amelynck</i>	323
36 Analyzing Complex Datasets Based on the Variability Framework, Distribution Analysis, and Generalized Linear Modeling <i>Frank Desmet</i>	332
37 Removing Obstacles to the Analysis of Movement in Musical Performance: Recurrence, Mixed Models, and Surrogates <i>Alexander P Demos and Roger Chaffin</i>	341
38 Dynamic Bayesian Networks for Musical Interaction <i>Baptiste Caramiaux, Jules François, and Frédéric Bevilacqua</i>	350

39	Temporal Dependencies in the Expressive Timing of Classical Piano Performances	360
	<i>Maarten Grachten and Carlos Eduardo Cancino Chacón</i>	
40	Interactions in Ensemble Music Performance: Empirical and Mathematical Accounts	370
	<i>Caroline Palmer and Anna Zamm</i>	
41	Linking Movement Recurrence to Expressive Patterns in Music Performance	380
	<i>Euler C. F. Teixeira, Mauricio A. Loureiro, and Hani C. Yehia</i>	
<b>PART 7</b>		
	<b>Music-Based Interaction Technologies and Applications</b>	<b>389</b>
42	Designing Action–Sound Metaphors Using Motion Sensing and Descriptor–Based Synthesis of Recorded Sound Materials	391
	<i>Frédéric Bevilacqua, Norbert Schnell, Jules François, Éric O. Boyer, Diemo Schwarz, and Baptiste Caramiaux</i>	
43	Designing for the Subtle: A Systematic Approach Toward Expressivity in New Musical Interfaces	402
	<i>Nicolas d’Alessandro</i>	
44	Gestural Agency in Human–Machine Musical Interaction	412
	<i>Juan Ignacio Mendoza and Marc R. Thompson</i>	
45	Gestural Musical Performance with Physiological Sensors, Focusing on the Electromyogram	420
	<i>Atau Tanaka and Miguel Ortiz</i>	
46	Sonic Microinteraction in “the Air”	429
	<i>Alexander Refsum Jensenius</i>	
47	Embodied Cognition and Digital Musical Instruments: Design and Performance	438
	<i>Joseph Malloch and Marcelo M. Wanderley</i>

# FIGURES AND TABLES

## Figures

1.1	A model of assessment.	13
2.1	Depiction of a metrical space, with time on the x-axis and the metrical level on the y-axis.	25
4.1	Spontaneous body movements of two young children playing <i>Ana's Game</i> .	45
7.1	Model of cognitive and sensorimotor resources for musical expressiveness.	73
9.1	Tripartite model of communication in musical performance.	92
10.1	The resilience framework as applied to the two test cases considered in this chapter.	99
12.1	Two posture images from a series of caricatures of Franz Liszt attributed to A. Göschl and published in the magazine <i>Borsszem Jankó</i> on April 6, 1873.	118
14.1	A simplified schema of musical performance.	135
15.1	(A) Cross-correlation lags in dyadic tapping, with uni-directional coupling and bi-directional (mutual) coupling. (B) Two dancers' foot movements, a windowed analysis. (C) Cross-correlation of finger movement mirroring, example from one pair. (D) The windowed analysis of the data in C.	145
16.1	Representation of coordination at multiple spatial (Panel A) and time (Panel B) scales, acknowledging constraints that affect entrainment and co-representation processes at these scales (Panel C).	151
18.1	Waveforms of the saxophone and bass tracks of the first eight bars (32-beat) played concomitantly on <i>I Just Can't Remember</i> .	171
19.1	Analysis workflow.	181
20.1	Summary (mean and standard deviation) of (A) Total Kinetic Energy ( <i>TKE</i> ), (B) CanCom1 ( <i>r</i> ), and (C) CanCom2 ( <i>r</i> ). Panels D, E, and F plot canonical scores over time.	191
21.1	Amplitude and phase relation of a driven harmonic oscillator.	197
21.2	Rows 1, 2, and 3 present data on tapping precision. Row 4 gives data on mean tapping phase.	201
25.1	The African hemiola style.	233
25.2	A <i>Bamaaya nyakboli</i> melody in a larger time span. The <i>kalamboo</i> onbeat is shown with a "movable one."	234

27.1	Schematic illustration of the analysis method applied to functional magnetic resonance imaging (fMRI) data.	251
30.1	Emotional experience arises as an interaction of arousal and expression intensity (the subjectively perceived degree to which an individual represents inner states, e.g., feelings and thoughts, by actions), so that when expression occurs over a certain arousal threshold, arousal is perceived as emotional arousal.	281
31.1	A theoretical model of the antecedents, moderators, and consequences of music use in the exercise and sport domain.	285
31.2	Hypothetical changes in the oxygenation (i.e., activation) of the dorsolateral prefrontal cortex across increasing levels of exercise intensity.	288
32.1	Top: Setup of the study: subjects being tested with the force plate. Bottom: Example of polar plots representing the movement of a subject in condition 1 (audio only) and condition 2 (live performance).	299
32.2	Example of the top-down analysis framework using ELAN representing video of performer and subject.	300
35.1	Correlation functions for chest markers displayed as heat maps for a musically untrained group and for a musically trained group.	328
36.1	Overview of sources of variability of human movement in systematic musicology research.	334
36.2	Examples of deviation from the normal distribution.	337
37.1	Panel A shows the medio-lateral postural sway during an expressive performance. Panel B shows the recurrence quantification plot of that sway. Panel C shows the recurrence rate and stability extracted from the recurrence quantification plot.	343
38.1	Generic representation of Dynamic Bayesian Networks (DBNs) applied to human motion modeling.	352
39.1	Sensitivity of IOI predictions to fermata, duration, and accent basis functions, for the 10 models obtained from 10-fold cross-validation.	367
41.1	Schematic diagram of the analysis method (A), computation of the motion recurrence map (B): top plot shows the tangential velocity curves; bottom plot shows the recurrence map (dark indicates high recurrence), excerpt from Brahms' Clarinet Sonata No.1 in F minor (C), and results of the analysis for the 30 performances (D): top plot shows the clarinet bell global motion recurrence map; bottom plots show the standard deviations of the audio parameters used as expressiveness descriptors.	382
42.1	General workflow of the design of movement-based interactive applications with recorded sound materials.	393
43.1	(A) Typical playing position for the HandSketch musical instrument; (B) rationale behind the idea to curve the playing diagram: combination of A and B circular movements leads to C as a natural playing curve; (C) superimposition of several HandSketch renderings of a three-note melody exhibiting high similarities; (D) illustration of glottal source parameters from the RAMCESS model together with fundamental frequency.	405
44.1	Human and machine are agents connected by signals. The model allows for the incorporation of more agents into a network.	415
47.1	(A) Model visualization based on Rasmussen's typology of human information processing. (B) An alternative depiction of the performer-DMI system, avoiding possible impressions that the instrument is a conduit from performer to audience.	441

## **Tables**

6.1	Overview of terms and their relation to the representational/ experiential dichotomy.	59
21.1	Output of Matlab ‘fitnlm’ regression.	201
25.1	Model of cultural transformation processes.	237
39.1	Predictive results for IOI, averaged over a 10-fold cross-validation on the Magaloff corpus.	366
46.1	Overview of the categories of spatial and temporal levels (approximate values).	432
46.2	An example matrix of possible spatiotemporal combinations.	433
