RILEM, The International Union of Laboratories and Experts in Construction Materials,
Systems and Structures, is a non profit-making, non-governmental technical association
whose vocation is to contribute to progress in the construction sciences, techniques and
industries, essentially by means of the communication it fosters between research and
practice. RILEM’s activity therefore aims at developing the knowledge of properties of
materials and performance of structures, at defining the means for their assessment in
laboratory and service conditions and at unifying measurement and testing methods used with
this objective.
RILEM was founded in 1947, and has a membership of over 900 in some 70 countries. It
forms an institutional framework for co-operation by experts to:
• optimise and harmonise test methods for measuring properties and performance of building
and civil engineering materials and structures under laboratory and service environments,
• prepare technical recommendations for testing methods,
• prepare state-of-the-art reports to identify further research needs,
• collaborate with national or international associations in realising these objectives.
RILEM members include the leading building research and testing laboratories around the
world, industrial research, manufacturing and contracting interests, as well as a significant
number of individual members from industry and universities. RILEM’s focus is on
construction materials and their use in building and civil engineering structures, covering all
phases of the building process from manufacture to use and recycling of materials.
RILEM meets these objectives through the work of its technical committees. Symposia,
workshops and seminars are organised to facilitate the exchange of information and
dissemination of knowledge. RILEM’s primary output consists of technical
recommendations. RILEM also publishes the journal Materials and Structures which
provides a further avenue for reporting the work of its committees. Many other publications,
in the form of reports, monographs, symposia and workshop proceedings are produced.

RILEM Publications

The following list presents the latest offer of RILEM Publications, sorted by series. Each publication is available in printed version and/or in online version.

RILEM PROCEEDINGS (PRO)

In relation to the International RILEM Conference on Materials, Systems and Structures in Civil Engineering, MSSCE 2016 which the present proceedings belongs to, the following RILEM proceedings will be issued:

PRO 108: Innovation of Teaching in Materials and Structures

PRO 109 (two volumes): Service life of Cement-Based Materials and Structures

PRO 110: Historical Masonry

PRO 111: Electrochemistry in Civil Engineering

PRO 112: Moisture in Materials and Structures

PRO 113: Concrete with Supplementary Cementitious materials

PRO 114: Frost Action in Concrete

PRO 155: Fresh Concrete

RILEM REPORTS (REP)

Contents

Preface
Ole Mejllhede Jensen, Konstantin Kovler, Nele De Belie
XI

Welcome
Ole Mejllhede Jensen
XII

1. Performance evaluation of Aplite rock based geo-polymer binder
Samindi Samarakoon, Samdar Kakay, Erland Soli Johnsen, Fredrik Meidell Knutsen, Jon Emil Tobias Knutsson
1

2. Evaluation of hardened state properties of GGBS-PC mortars modified by superabsorbent polymers (SAP)
Fernando C. R. Almeida, Agnieszka J. Klemm
11

3. Can superabsorbent polymers mitigate shrinkage in cementitious materials blended with supplementary cementitious materials?
Didier Snoeck, Ole Mejllhede Jensen, Nele De Belie
21

4. Influence of particle size distribution of slag, limestone and fly ash on early hydration of cement assessed by isothermal calorimetry
Yury Villagrán Zaccardi, Elke Gruyaert, Natalia Alderete, Nele De Belie
31

5. Reactivity of fly ash in the presence of chemical activators
Frank Winnefeld, Salaheddine Alahrache, Jean-Baptiste Champenois, Frank Hesselbarth, Barbara Lothenbach
41

6. Comparison of reaction degrees of slag and fly ash obtained by thermogravimetry and selective dissolution
Yury Villagrán Zaccardi, Elke Gruyaert, Nele De Belie
51

7. Particle Size Distribution and Specific Surface Area of SCMs compared through experimental techniques
Natalia M. Alderete, Yury A. Villagrán, Gabriela S. Coelho Dos Santos, Nele De Belie
61

8. Effect of SCMs on hydration kinetics of Portland cements
Barbara Lothenbach, Axel Schöler, Maciej Zajac, Mohsen Ben Haha, Frank Winnefeld
73

9. Effect of fly ash on pore structure of hardened cement paste measured by thermoporometry
Kiyofumi Kurumisawa, Takuya Sugiyama, Masanori Miyamoto, Toyoharu Nawa
83

10. Radiological study of cements and geopolymers
Francisca Puertas, Catalina Gasco, Luis Yague, Nuria Navarro, José Antonio Suarez, Mar Alonso, Manuel Torres, Patricia Rivilla
93

11. Supplementary cementitious materials in the era of sustainable concrete
Vyacheslav Falikman, Nikolai Bashlykov
103

12. Realizing the strengths of SCM concretes by recognizing its weaknesses
R. Doug Hooton
113

13. Durability of high volume fly ash concrete
Himabindu Myadaraboina, Mochammad Solkin, Indubhusan Patnaikuni
123
14. Natural Zeolites as SCMs: Challenges and solutions  
   Maria Juenger, Lisa Burris, Saamiyaa Seraj, Raissa Ferron

15. Effects of w/p ratio and limestone filler on permeability of cement pastes  
   Quoc Tri Phung, Norbert Maes, Diederik Jacques, Geert De Schutter, Guang Ye

16. Predictions of the mechanical performance of concrete made with ternary cements  
   Kim-Seang Lauch, Vinciane Dieryck, Benoit Parmentier

17. Durability of concrete made with ternary cements containing slag or fly ash and limestone filler  
   Kim-Seang Lauch, Vinciane Dieryck

18. Comparison of the expansion of mortar containing shell powder of surf clam and scallop  
   Akio Watanabe, Kazumi Hirokawa, Takashi Kondo

19. Eco-concrete for precast elements with effective mineral micro- and eco-fillers  
   Gheorghe-Alexandru David, Joachim Juhart, Elke Krischey, Claudia Baldermann,  
   Florian Mittermayr, Markus Krüger

20. The effect of SCM replacement on autogenous deformation of high performance concrete  
   Abdulaziz Alaskar, R. Douglas Hooton

21. Calcined dredged sediments as supplementary cementitious materials: properties and pozzolanic reactivity  
   Ruben Snellings, Liesbeth Horckmans, Pawel Durdzinski, Céline Van Bunderen,  
   Lucie Vandewalle, Koenraad Van Balen, Joris Dockx, Jos Vandekeybus, Özlem Cizer

22. High volume fly ash hybrid alkali activated cements and concretes for indoor application  
   Pavel Krivenko, Oleksandr Kovalehuk, Valentina Grabovchuk

23. Physical and mechanical properties of cement mortars with biomass ashes as SCM  
   Mirjana Malešev, Vlastimir Radonjanin, Miroslava Radeka, Slobodan Šupić, Suzana Draganić

24. Differentiating the physical and chemical effects of supplementary cementitious materials in cement mortars  
   Manu Santhanan, Hemalatha M S

25. Coal bottom ash feasibility study to be a new Portland cement constituent  
   Miguel Angel Sanjuán, Esperanza Menéndez, Cristina Argiz, Amparo Moragues

26. Physical properties and pore solution analysis of alkali activated fly ash-slag pastes  
   Marija Nedeljiković, Yibing Zuo, Kamel Arbi, Guang Ye

27. Carbonation mechanism of different kinds of C-S-H: Rate and products  
   Bei Wu, Guang Ye

28. Investigation of the moisture influence on permeation properties of alkali-activated slag concrete  
   Kai Yang, Sreejith Nanukuttan, Changhui Yang, Bryan Magee, Jianxiong Ye,  
   Muhammed Basheer

VIII
29. The rate of strength development of mortar mixes with SCMs at elevated curing temperatures  
Marios Soutsos, Gidion Turu'allo

30. Outcomes of the RILEM round robin on degree of reaction of slag and fly ash in composite cements  
Paweł T. Durdziński, Mohsen Ben Haha, Susan A. Bernal, Nele De Belie, Elke Gruyaert, Barbara Lothenbach, John L. Provis, Axel Schöler, Christopher Stabler, Zhijun Tan, Anya Vollpracht, Frank Winnefeld, Yury Villagrán Zaccardi, Maciej Zając, Karen L. Scrivener

31. Effect of testing conditions on the loss on ignition results of anhydrous granulated blast furnace slags determined via thermogravimetry  
Susan Bernal, Xinyuan Ke, Oday Hussein, John Provis

32. Influence of SCM on pore solution composition  
Anya Vollpracht, Barbara Lothenbach, Ruben Snellings, Johannes Haufe

33. Chloride penetration in concrete under compression or splitting tensile load representing 60 - 65 per cent of the ultimate load  
Hugo Eguez, Nele De Belie, Geert De Schutter

34. Applicability of Nordic clays as SCM  
Harald Justnes, Tone Østnor, Serina Ng

35. Production of ceramics using bottom ash and fly ash from a thermal power plant  
Biljana Angjusheva, Emilija Fidancevska, Vilma Ducman, Ljubica Vladicevska

36. Ultra high performance concrete (UHPC) with low silica fume contents and limestone aggregates  
Guillermo Hernández-Carrillo, Alejandro Durán-Herrera, Pedro L. Valdez-Tamez

37. Internal curing of high performance concrete with superabsorbent polymers: Evaluation of durability  
Jennifer Annette Canul Polanco, Alejandro Durán Herrera, Pedro Leobardo Valdez Tamez

38. Do supplementary cementitious materials and blended cements indeed increase cracking potential of concrete?  
Konstantin Kovler

39. Replacement of cement with waste ceramic powder in cementitious composites: Results of a preliminary investigation  
Liberato Ferrara, Peter Deegan, Andrea Pattarini, Mohammed Sonebi, Su Taylor

40. Permeability of ambient cured fly ash geopolymer concrete blended with additives  
Pradip Nath, Prabir Sarker

41. Sintering of ceramics based on mechanically activated fly ash  
Emilija Fidancevska, Jorg Bossert, Biljana Angjusheva, Vojo Jovanov, Vineta Srebrenkoska

42. Investigation of the effect of partial replacement of Portland cement by fly ash on carbonation using TGA and SEM-EDS  
Andres Belda Revert, Klaartje De Weerdt, Karla Hornbostel, Mette Geiker
43. Effects of waste glass and activating solution on tungsten mining waste alkali-activated binders
   Gediminas Kastiukas, Xiangming Zhou

44. Performance of alusilica as mineral admixture in cementitious systems
   Lin Chi, Ole Mejlhed Jensen

45. Mitigation of early age shrinkage in self-consolidating paste systems using superabsorbent polymers
   Syed Ali Rizwan, Shozab Mustafa, Waleed Ahmed
